

We have focused;

Working with architect, construction companies, aluminium extrusions and fabricators. Creating solution on facade design & engineering. innovative new Architectural system designs & custom made solutions.

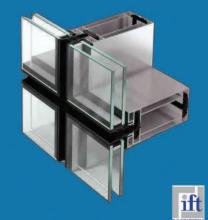

Conceptual design

Documentation & tendering inspection and testing performance Cost management 3D models & rapid prototypes Static studies

Thermal and acoustics report

CE documantation innovation

Patenting documentation

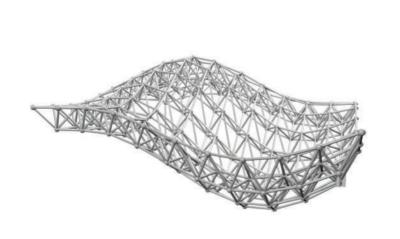

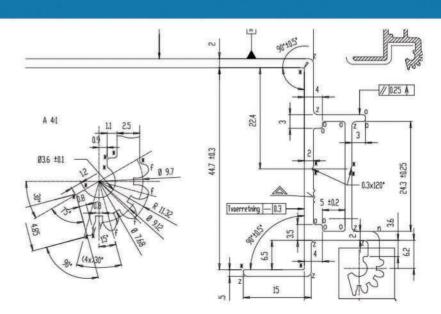

Facade Architecture & engineering and design services, consultanting services regarding the building envelope, producement, system selection, system design, project management, analysis according to European standarts with a notified body, aluminium frame facades double skin facades louvre systems both fixed and automated

Glass constructions, clading materials such as aluminium composite panels, ceramic tiles, granite stone, marble and light weight concrete panels, atrium and glass canopies with fixed, sliding and opening roof panels

Thermal simulation to determine the thermal conductivity value (Ucw) of the curtain wall

Energy Consumption study and life cycle operating cost the building envelope
